# **WaterProof® Color Versatility (CV) PANTONE® Metallic Blending Guide**

April 2000

WaterProof® Color Versatility Coater

P/N 117131001  
H-83337

PANTONE® is a trademark of Pantone, Inc.

## **INTRODUCTION**

This WaterProof® Color Versatility Metallic Blending Guide contains blending formulas and a procedure to make WaterProof® CV inks coatings which will simulate the colors in the PANTONE® Metallic Color Formula Guide. These formulas provide a starting point in simulating the Pantone colors. Color corrections may be required to meet a particular customer's needs. This guide will be periodically upgraded as new formulas are approved by Pantone, Inc. All compositions are given in weight percent. All coatings were made using a #11 rod. Formulas marked with an asterisk(\*) are in the process of being evaluated for approval by Pantone.

The formulas shown here are for simulating PANTONE colors on coated stock when viewed under 5000°K. Some simulations may be metamerics. Refer to the current editions of the PANTONE Color Publications for the approved PANTONE Color Standards. Pantone, Inc. assumes no responsibility for formula accuracy. PANTONE® and other Pantone, Inc. trademarks are the property of Pantone, Inc. Portions © Pantone, Inc., 1992.

## **WATERPROOF® CV METALLIC COLOR PROCEDURE**

To make CV (Color Versatility) proofs simulating metallic colors, the following are required:

- A complete WaterProof CV system including the Pantone Basic inks and transparent white extender, receptor film, a balance, a coating unit and
- WaterProof Silver and Gold films.

Product stock numbers are given on the next page.

Metallic colors are made by direct coating of the CV ink solution onto the appropriate WaterProof metallic film (Silver or Gold).

1. Weigh out the CV metallic ink composition specified into a bottle and then thoroughly mix. At least 25 grams are required to make a full-size coating.
2. Place a sheet of blotting paper on top of the Poron pad on the coating unit. Next place a sheet of WaterProof Silver (or Gold) on top of the blotting paper **INSTEAD** of the CV Receptor film normally used to make CV coatings.
3. Place the coating rod in the rod holder and lower onto the Silver or Gold film.
4. Place the CV solution along the coating bar and run the coating through the coater in the same way as when making all CV coatings.
5. Dry the film and then proceed to remove the coated film from the paper and Poron pad. You have now completed coating the CV solution onto the WaterProof metallic film.
6. Proceed to expose, process and transfer the film in the same manner as used with all WaterProof and CV films. The result will be an extremely high quality simulation of a metallic color.

PANTONE® and other Pantone, Inc. trademarks are the property of Pantone, Inc. The formulas shown here are for simulating PANTONE Colors on coated stock. Pantone, Inc. assumes no responsibility for formula accuracy. Portions © Pantone, Inc., 1992. Refer to Introduction Page.
